## **CDPH Reports No Confirmed Cases of Ebola in the State**

**CDPH Press Release dated 8/19/2014**

Low-risk patient tested out of an abundance of caution; The California Department of Public Health (CDPH) is working with local health departments and health care providers statewide to identify patients who have traveled to countries affected by Ebola. CDPH is directing health providers to follow protocols established by the federal Centers for Disease Control and Prevention (CDC) in the diagnosis and treatment of these patients. People returning from the affected areas who may be at high risk for Ebola should be isolated and their blood sent to CDC for testing. Some low-risk patients, like the one from Sacramento, may be tested out of an abundance of caution. CDPH works with local health departments and hospitals to arrange for proper specimen shipment and Ebola virus confirmatory testing.

There are currently no confirmed cases of Ebola in California. There have been no patients admitted to California hospitals who are considered to be at high risk of Ebola according to CDC criteria.

If a person has travelled to an affected country and develops a fever within three weeks of their return, they should contact their health care provider and let the provider know of their travel history.

The risk of the spread of Ebola in California is low. Any patient suspected of having Ebola can be safely managed in a California hospital following recommended isolation and infection control procedures. Suspect cases of Ebola will be investigated by local health departments in consultation with CDPH.

State and local public health officials in California are monitoring the situation closely and taking steps to keep Californians safe. Our advanced health care system has appropriate protocols in place to prevent the spread of this often deadly disease.

Ebola is an infectious disease caused by the Ebola virus. Symptoms may appear anywhere from two to 21 days after exposure and include fever, headache, joint and muscle aches, weakness, diarrhea, vomiting, stomach pain and abnormal bleeding. It is classified as a viral hemorrhagic fever (VHF) because of the fever and abnormal bleeding. Among the VHFs, Ebola is feared because of its high mortality. There are no specific treatments but supportive therapy can be provided to address bleeding and other complications.

French Fire (Final)

**CalOES Mission # 2014-IREOC-4143** - Mariposa County APCD.

Demobilized four E-BAMs on 8/14.

Two E-BAMs have been cached at the District offices.

Eiler, Bald, and Day Fires

**CalOES Mission # 2014-IREOC-4578** - Shasta County APCD.

Demobilized one E-BAM (Lakeshore)

Plan to demobilize two E-BAMs (Fall River Mills and Burney) on 8/20.

PM2.5 levels\* are at or near background; demobilization of these units is likely next week.

Klamath Fires (Beaver, Little Deer, July, Happy Camp Complex, Man, and Frying Pan)

**CalOES Mission # 2014-IREOC-4568** - Siskiyou County APCD.

Three more E-BAMs were deployed on 8/12 through 8/14 (Somes Bar, Mt. Shasta City, and Happy Camp).

PM2.5 levels\* at Klamath have spiked regularly in the moderate to very unhealthy range.

E-BAM at Happy Camp has briefly recorded in the hazardous range, and has experienced low flow and telemetry issues.

Lodge Complex Fire

**CalOES Mission # 2014-IREOC-4605** - Mendocino County APCD.

Deployed one additional E-BAM to the Leggett evacuation center on 8/12.

PM2.5 levels\* are intermittently moderate to unhealthy.

\* PM2.5 - Particles less than 2.5 micrometers in diameter (PM2.5) are referred to as "fine" particles and are believed to pose the greatest health risks. Because of their small size (approximately 1/30th the average width of a human hair), fine particles can lodge deeply into the lungs.

# WEATHER

## WEATHER SYNOPSIS BY REGION:

### **NORTHERN CALIFORNIA:**

The weak southern edge of a Pacific Northwest weather system will linger over Northern Operations today. Skies will be mostly sunny across the region, but some afternoon (mostly small) cumulus is also likely to develop over the northern and eastern mountains. A few afternoon and evening mountain thunderstorms may develop in the more eastern areas, especially around Tahoe southward. Thursday, relatively dry northwest flow will be over Northern Operations as another low moves into the Pacific Northwest. Friday that low will bring cooler temperatures and some gusty westerly winds to our region and perhaps some high cloudiness, but no precipitation is expected. For the weekend, dry northwest flow and near seasonable temperatures and dryness will prevail. Early next week high pressure will strengthen over the region for a warming and more decisive drying trend. Afternoon temperatures in the warmest inland valleys are likely to return to near 100. Drainage bottoms and valleys will have areas with reasonably good overnight relative humidity recovery for the next few days, but mid and upper slopes are more likely to see some thermal belt conditions develop. Periods of light northerly winds over the weekend into early next week should thin the marine layer considerably and will provide some areas with relatively low overnight relative humidity recovery including some valleys.

### **SOUTHERN CALIFORNIA:**

A line of wet thunderstorms over San Diego County and the Mojave Desert will continue moving eastward this morning. These storms are expected to weaken as they move eastward at 10-15 mph, but brief heavy rain will accompany the strongest storms. The storms have produced abundant lightning with over 1,000 strikes recorded since midnight. Even though some of the storms have brought heavy rain and even small hail, some new starts may have occurred as a result of the convection. The new starts may become active by early afternoon due to increased sunshine. By midafternoon, the atmosphere will destabilize once again, leading to scattered thunderstorms. The best chance of convection today will be over the eastern Angeles National Forest, the Antelope Valley, as well as the San Bernardino and Cleveland National Forests eastward into the deserts. The storms today should move rapidly to the northeast at 10-20 mph. The upper low which is responsible for these storms will continue its journey from Point Conception southeastward into San Diego County through Thursday night, which will result in a continuation of scattered wet storms through Thursday evening. A few storms may develop late tonight, but they should be fewer in number as compared to last night. Elsewhere, expect temperatures to be 5-10 degrees below seasonal averages through Friday, with highs in the lower to mid-90s in the San Joaquin Valley, to the 80s in the southern California valleys, to the upper 60s in the mountains. The thunderstorms should come to an end Thursday evening, and no thunderstorms are expected Friday through the weekend. However, moisture associated with tropical storm Lowell pooling over Baja may infiltrate the area early next week. This may lead to scattered wet thunderstorms returning next Monday or Tuesday. Temperatures will likely climb back to near normal readings over the weekend, but no strong wind or exceptionally hot temperatures are expected the next 7 days.

### Situational Summary

On January 17, 2014 Governor Edmund G. Brown proclaimed a State of Emergency and directed state officials to take all necessary actions to prepare for drought conditions. The State Operation Center (SOC) is activated to implement objectives in support of the Governor's priorities. The lack of winter rain and snowfall has resulted in extremely dry conditions in many parts of the State. Reservoir levels are down significantly from where they should be on average for this time of year. If conditions continue severe impacts to municipal water supplies, agriculture (plants and livestock) and firefighting capabilities are likely in store for the State over the next few months. Negative economic impacts will also result.

The drought could result in severe impacts to the municipal water supplies, wells, agriculture (plants and livestock) and firefighting capabilities for several months. The SOC continues to be activated to monitor the situation statewide, and support regional and local operational areas.

- Current Reservoir Levels continue to decline. Levels as of August 19<sup>th</sup> : Don Pedro 42%; Exchequer 17%; Folsom Lake 40%; Lake Oroville 32%; Millerton Lake 47%; New Melones 24%; Pine Flat 12%; San Luis 20%; Lake Shasta 32%; Trinity Lake 31%; Pyramid Lake 94%; and Castaic Lake 44%.

- Emergency Drinking Water Procurement and Distribution Planning Guidance (rev. May 2014)  
Significant changes have occurred to the structure of California's state government organization. Rapid advances in systems, science, and technology have helped emergency managers improve coordination, forecasting, and situational awareness. Because of these changes, the *Multi-Agency Emergency Response Procedures for Potable Water Procurement & Distribution* document has been replaced by the *Emergency Drinking Water Procurement and Distribution Planning Guidance*. The intent of this guidance document is to clarify the roles and responsibilities of the stakeholders involved in locating, procuring, and delivery of emergency drinking water<sup>1</sup> to populations in California. Consequently creating a framework for agencies and organizations to work together to enhance preparedness.

### Situational Summary

- State Board Mandatory Conservation Regulations Now in Effect: The state's first-ever emergency regulations mandating urban water conservation became effective will be in effect until April 25, 2015.
